

ABSTRACT

A demountable wind-resistant sun shade canopy for shading children's play areas or other actively used areas having a first perimeter. the canopy cover, being removably secured over a metal support structure, is comprised of vertical columns upon which are mounted at the upper end thereof, respectively, uniquely configured bracket fittings, each bracket fitting providing secure mounting for a cantilever beam extending outwardly toward a second perimeter of the area to be shaded, and providing a secure mounting for a hip beam extending upward and toward the inner portion of the area to be shaded. The canopy forms a second perimeter which extends beyond the perimeter of the first perimeter, of the play area, to extend the shade cover the play area.
